Speakman teaches detergent compositions containing quaternary ammonium clays (see abstract). An example of such a composition comprises coconut soap, tetramethylammonium montmorillonite, builders, and a bleach (col. 12, example 1A). The examiner notes in pages 12 and 13 of applicants' specification that organoclays are the preferred particles of their invention and acknowledge that such organoclays are well known in the art and are prepared by methods well known in the art. Accordingly, the examiner concludes that the organoclays described in the specification and those taught by the reference are one and the same, and so with respect to claim limitations drawn to specific functional groups, the examiner maintains these limitations are inherently present in the organoclays of the reference. As this reference meets all material limitations of the claims at hand, the reference is anticipatory.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles I. Boyer whose telephone number is 571 272 1311. The examiner can normally be reached on M-F 9:30 to 6:00.
